

GOLDPOWER

THE GOLD STANDARD IN RENEWABLE ENERGY: SUSTAINABLE. ADDITIONAL. IMPACTFUL.

In a nutshell

GoldPower enables you to compensate the environmental impact of your power use, wherever your operations may be. GoldPower is fully reportable under key reporting schemes and assures true additionality along with verified social and environmental benefits.

As leading companies are continuing to commit to sourcing 100% renewable energy it has never been more important to have certainty of its origin. GoldPower provides absolute traceability, transparency and quality assurance as well as social and environmental benefits.

Meeting multiple global sustainability targets simultaneously is a challenge

Leading companies have signed long-term commitments to power their operations with renewable energy, lower their carbon footprint and contribute to the UN Sustainable Development Goals (SDGs).

However, these ambitions are often challenged by procurement constraints, legislative restrictions or a lack of transparency regarding the available products and solutions.

Choose renewable energy with measurable sustainability impacts

GoldPower is a renewable energy product based on Gold Standard labelled Renewable Energy Certificates (RECs) that not only provides the highest quality of renewable energy but has measurable, positive impacts on communities and the environment in developing countries. It combines robust verification and tracking of renewable electricity generation with additionality, social and environmental safeguards, and transparency through monitoring and 3rd party audits.

Reportability and sustainability: Combining the best of two worlds

- GoldPower provides you with one globally consistent product based on the established Gold Standard for Global Goals and I-RECs Code.
- Reportable under an increasing number of global Scope 2 reporting schemes such as the CDP and GRI, GoldPower complies with criteria defined by the WRI's GHG Protocol Scope 2 Guidance, RE100 and WWF Climate Savers.
- All GoldPower projects meet the stringent quality criteria, proof of additionality and 3rd party verification requirements of the Gold Standard REC Label.
- By delivering verified social and economic benefits, GoldPower helps to drive positive changes to people, communities and the environment, and thus contributes to achieving the Global Sustainable Development Goals.

"We know GoldPower as a reliable and credible renewable energy product with true added-value for our stakeholders."

Reinaldo Xisto Vieira Costa

Corporate Vice President, Product Supply at Novo Nordisk

"WWF recommends GoldPower to companies that want to drive quality renewable electricity solutions."

WWF International

GoldPower is the world's first global renewable energy label.

ELECTRICITY USE

Your organisation's electricity use is sourced from the energy grid which relies, at least in part, on the burning of fossil fuels.

GOLDPOWER

By purchasing GoldPower your organisation commits to sourcing, clean, traceable renewable energy.

GLOBAL RENEWABLE ENERGY

Your purchase of GoldPower directs investment to renewable energy. This also benefits local communities and the environment whilst helping to achieve the United Nations Sustainable Development Goals.

Global team

We are a truly global provider of sustainability solutions and services. Our team is made up of over 250 skilled and enthusiastic professionals from over 20 different countries, based in offices spanning 6 continents.
